Introduction:-

vermicompost is the product of the decomposition process using various species of worms, usually red wigglers, white worms and other earth worms, to create a mixture of decomposing vegetable or food waste, bedding materials, and vermicompost. Considering the commercial viability and self-employment potential of vermicompost and marketing the department is offering the same as add on certificate course to the undergraduate students of the college.

Aims of the course:-

- To provide hands-on training
- To provide students awareness about the marketing trends of vermicompost.
- To give students exposure to the experiences of experts in field and functioning of vermicompost.

To help the students to learn a means of self-employment and income generation.
